

NGUYEN QUANG HUY

Dong Nai, Vietnam · +84 327 739 497 · reisen1943.ctf@gmail.com · github.com/AnduinBrian
anduinbrian.github.io

A security engineer who is always eager to learn new things and take on new challenges. With 6+ years of experience in reverse engineering, malware analysis, threat hunting, and more. In my free time, I enjoy finding vulnerabilities in IoT devices, playing CTFs, and exploring new areas such as RF and automotive security.

PROFESSIONAL EXPERIENCE

Secuwall, Dubai, UAE **Red Team Specialist**

Nov 2025 – Present

- Engineered and orchestrated automated penetration-testing workflows using Temporal to scale security-assessment capacity across engagements.
- Integrated security scanners (Nessus, headless Burp Suite) into the platform, defining flexible, repeatable scan pipelines through YAML configuration.
- Developed custom malware and post-exploitation payloads in C/C++ to emulate advanced persistent threats (APTs) during internal red-team engagements.
- Implemented defense-evasion techniques to bypass modern EDR/AV solutions.

Asia Commercial Bank (ACB), Vietnam **SOC Analyst / Threat Intelligence**

Apr 2023 – Nov 2025

- Built and maintained an automated IoC collector integrating MISP, VirusTotal, and OTX with a CAPEv2-based sandbox to extract malware indicators of compromise.
- Monitored and triaged malware alerts, responding promptly to detected threats.
- Authored malware intelligence reports covering types, behaviors, system impact, infection vectors, evolution, notable campaigns, and mitigation strategies.
- Analyzed phishing emails by content, headers, and attachments, and issued user advisories.
- Built and maintained a system to aggregate intelligence on leaked accounts and credentials.
- Developed a custom loader to bypass antivirus software in support of red-team operations.
- Deployed and administered an ESXi server providing virtual machines for exploit testing.
- Analyzed and reproduced publicly disclosed Linux vulnerabilities.

VinCSS – Internet Security Services, Vietnam **Incident Response**

Apr 2022 – Apr 2023

- Verified and triaged incident alerts to assess and remediate potential security threats.
- Performed forensic analysis on infected machines to gather evidence and identify malware.
- Reverse-engineered malware, extracted IoCs, and developed specialized tooling to remove malware from infected systems.
- Hunted malware on VirusTotal and Any.Run — uploading samples, analyzing behavior, and extracting IoCs.
- Assessed suspicious emails by content, headers, and attachments.

Armor Security, Vietnam **Malware Analyst**

Aug 2019 – Apr 2022

- Analyzed malware on VirusTotal and Any.Run, tracked emerging threat trends, and shared mitigation insights.
- Reported on malware campaigns targeting Vietnamese internet users, detailing types and impact.
- Monitored and documented APT group activity targeting Vietnam, analyzing tactics and impact.
- Audited company systems for malware presence.
- Wrote IDA scripts to de-obfuscate malware.
- Performed mobile-application penetration tests using Frida and JEB.
- Authored YARA rules for malware detection.

VULNERABILITY RESEARCH (CVES)

- Discovered 8 vulnerabilities in TOTOLINK T6 routers, all assigned CVE identifiers.
- **Critical (1):** CVE-2025-7862.
- **High (7):** CVE-2025-6916, CVE-2025-7758, CVE-2025-7837, CVE-2025-7862, CVE-2025-7912, CVE-2025-7913, CVE-2025-8170.

PROJECTS & RESEARCH

- **TOTOLINK T6 Router Research** — end-to-end firmware vulnerability discovery on the T6 router. (link)
- **ADS-B Protocol Research** — studied the ADS-B protocol, capturing and extracting information from live signals. (link)
- **Address Translation** — explored MMU operation and virtual-to-physical address translation as a foundation for microarchitectural exploitation. (link)
- **CTF** —published write-ups:
 - biOsCTF 2025 – challenges about CAN Bus. (link)
 - Practical car hacking – Entry level to car hacking (keyfob, ethernet,...). (link)
 - STARPWN 2026 – challenges about RF, Satellite,... (link)

ACHIEVEMENTS

- **Flare-On Challenge** — completed four consecutive years (2022–2025). Handle: Reisen_1943.
- **pwn.college** — earned Orange, Yellow, Green, and Blue belts. Handle: Reisen_1943.
- **CTF Challenge Author** — designed and deployed a reverse-engineering challenge for the Crackmes.one Reverse Engineering CTF 2026, receiving highly positive feedback.

EDUCATION

Posts and Telecommunications Institute of Technology (PTIT), Vietnam	2015 – 2020
Engineer's Degree, Information Security	

SKILLS & OTHER

Skills: Reverse Engineering, Exploit Development, Vulnerability Research, Malware Development, Malware Analysis, Threat Intelligence, Incident Response, Digital Forensics, C/C++, Python, x86/x64 & ARM Assembly,...

Domains: IoT, Hardware, RF, Automotive (CAN Bus), Microarchitectural exploitation,...

Tools: IDA, Ghidra, JADX, x64dbg, GDB, Frida, JEB, Burp Suite, Nessus, MISP, CAPEv2, VirusTotal/OTX, YARA, ESXi, Temporal,...

Languages: Vietnamese (native), English (professional working)
