

NGUYEN QUANG HUY

SECURITY ENGINEER

CONTACT

- +84-327-739-497
+971 -558-601-943
- reisen1943.ctf@gmail.com
- Dubai, UAE
- [anduinbrian.github.io](https://github.com/AnduinBrian)
- <https://github.com/AnduinBrian>

EDUCATION

- 2015 - 2020
- POSTS AND
TELECOMMUNICATIONS
INSTITUTE OF TECHNOLOGY
- Security Engineer

SKILLS

- Programming Language:
 - C/C++
 - Python
 - Assembly
- Reverse Engineering
- Exploit Development
- Using SRE tool:
 - Decompiler: IDA, Ghidra, JADX,...
 - Debugger: x64dbg, gdb

LANGUAGES

- Vietnamese
- English

WORK EXPERIENCE

- Secuwall (on-site Dubai, UAE)** 11/2025 - Present
Red Team Specialist
 - Engineered and orchestrated complex automated penetration testing workflows (utilizing frameworks like Temporal) to scale security assessment capabilities.
 - Integrated various security scanning tools (e.g., Nessus, Burp Suite headless) into the platform, utilizing YAML for pipeline configurations to ensure flexible and repeatable scans.
 - Developed custom malware and post-exploitation payloads in C/C++ to simulate advanced persistent threats (APTs) during internal Red Team engagements.
 - Implemented defense evasion techniques to successfully bypass modern EDR/AV solutions.
- Asia Commercial Joint Stock Bank (ACB)** 04/2023 - 11/2025
SOC Analyst/Threat Intelligence
 - Build and maintain an IoCs auto-collector using MISP and VirusTotal/OTX combined with a SandBox (based on CAPEv2) to extract malware's IoCs.
 - Monitor and process alerts for malware, promptly responding to potential threats detected.
 - Create a report on malware, covering its types, behaviors, impact on systems, common infection vectors, evolution, notable attacks, and strategies for prevention and mitigation.
 - Analyze the phishing email and warn the user.
 - Build and maintain a system to collect all information about leaked accounts.
 - Develop a custom loader to bypass antivirus software to support red team operations.
 - Install and manage an ESXi server to provide virtual machines for testing exploits.
 - Analyze and reproduce publicly disclosed vulnerabilities on Linux.
- VinCSS - Internet Security Services** 04/2022 - 04/2023
Incident Response
 - Verify incident alerts to assess and address potential security threats.
 - Perform forensic analysis on the infected machine to gather evidence, identify malware.
 - Analyze malware and extract IoCs and develop a specialized tool to remove malware from infected systems.
 - Hunting malware on VirusTotal/Any.Run involves uploading samples, analyzing behavior, extracting IOCs.
 - Verify the abnormal email by its content, headers, and attachments to assess threats.

Malware analyst

- Analyzing malware on VirusTotal/Any.Run, tracking trends, and sharing insights for emerging threats and mitigation.
- Report on malware attacks targeting Vietnamese internet users, detailing types, impacts.
- Monitoring and documenting advanced persistent threat (APT) group activities targeting Vietnam, analyzing tactics and impacts.
- Scrutinize for any malware in the company's system.
- Write IDA script to de-obfuscate malware.
- Pentest mobile application using frida, JEB,...
- Write yara rules for malware.

SIDE-PROJECT

- I do research on automotive, hardware, RF and IoT in my free time:
 - **Journey with Totolink router** - Finding vuln on the T6 router.
(<https://github.com/AnduinBrian/https://anduinbrian.github.io/posts/blogs/totolink-t6-v3/>)
 - **About ADS-B** - Learn about the ADS-B protocol, capture and extract info from it
(<https://anduinbrian.github.io/posts/blogs/about-ads-b/>)
 - **Address Translation** - Learn about how the MMU work, how to translate from Virtual Address to Physical Address. This will help in Microarchitecture exploitation techniques.
(<https://anduinbrian.github.io/posts/blogs/address-translation/>).
- I play CTF with "CTF Academy" Team, mentored by **Shellphish**:
 - **bi0sCTF 2025** - Writeup about CAN Bus challenges.
(<https://anduinbrian.github.io/posts/writeups/bi0sctf---2025/>)
 - **Practical Car Hacking** - Writeup about basic task in car hacking.
(<https://anduinbrian.github.io/posts/writeups/practical-car-hacking-ctf/>)

ACHIEVEMENT

The Flare-on Challenge 2022 - 2025

- Participate and finish the Flare-on Challenge (consecutive 4 years).
- *Username: Reisen_1943*

pwn.college

- Obtained: Orange Belt | Yellow Belt | Green Belt | Blue Belt
- *Username: Reisen_1943*

CVEs

- **Vulnerability Discovery:** Identified 8 vulnerabilities in TOTOLINK T6 routers.
- **CVEs Awarded:**
 - **1 Critical:** CVE-2025-7862.
 - **7 High:** CVE-2025-6916, CVE-2025-7758, CVE-2025-7837, CVE-2025-7862, CVE-2025-7912, CVE-2025-7913, CVE-2025-8170.

CTF Contribute:

- **Crackmes.one Reverse Engineering CTF 2026**
 - *Designed and deploy a Reverse Engineering challenge. My challenge received highly positive feedback.*
